TABLE OF CONTENTS

Home View

1. Header

The header has two parts. One is the Amazon logo. The other is the navigation bar.

The navigation bar can navigate the customer to the other three web pages.
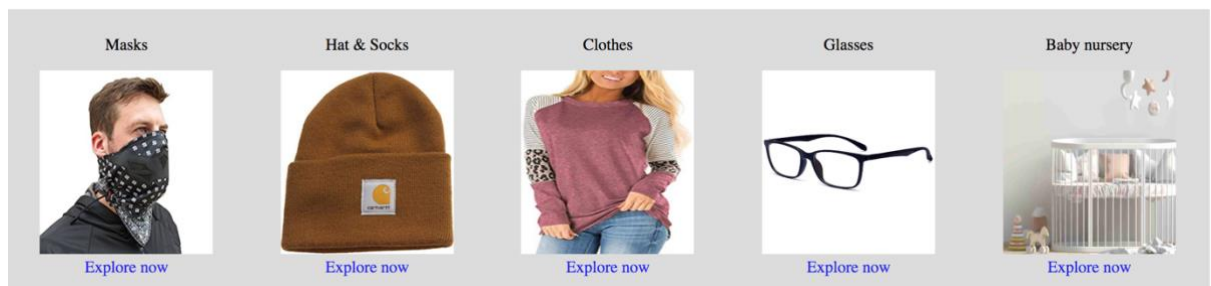

The code is written in main.handlebars file. The style is set in style.css file.
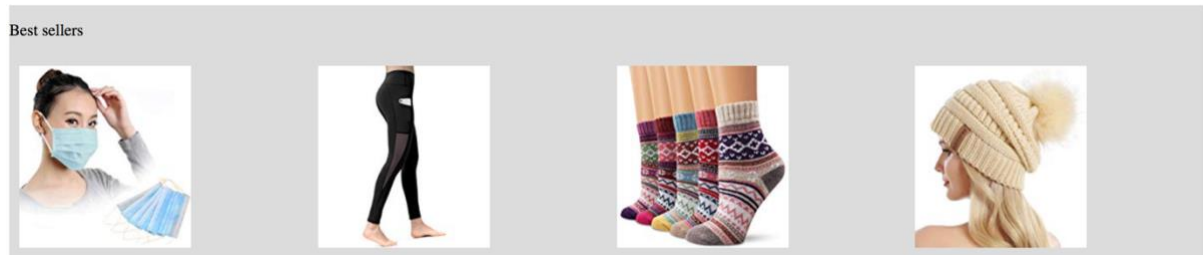

2. Promotional Section

The promotional section is about the promotional information. The code is written in product.js file and home.handlebars file. The style is set in style.css file.

3. Product Category Section

The product category section is about the category information. The code is written in product.js file and home.handlebars file. The style is set in style.css file.

4. Best Seller Section

The best seller section is about the products which are popular. The code is written in product.js file and home.handlebars file. The style is set in style.css file.

5. Footer

The footer has three parts. One is the menu items. Second is the social media links. The last is the logo. The code is written in main.handlebars file. The style is set in style.css file.

Product Listing Page

1. Product Listing Page

      Product listing page lists all the products. The code is written in product.js file and products.handlebars file. The style is set in style.css file. Every product shows the title, the price, the category and an attribute indicating if it is a best seller or not.

2. Header, Navigation and Footer

Product listing page also has the header, the navigation and the footer like the home page. The code is written in main.handlebars file. The style is set in style.css file.

3. Product listing page layout
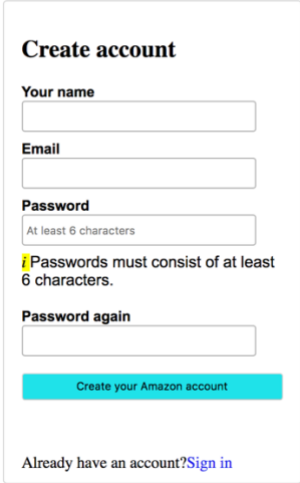

The layout of product listing page is set with grid. The whole div box has three columns.

Registration View

1. Registration page
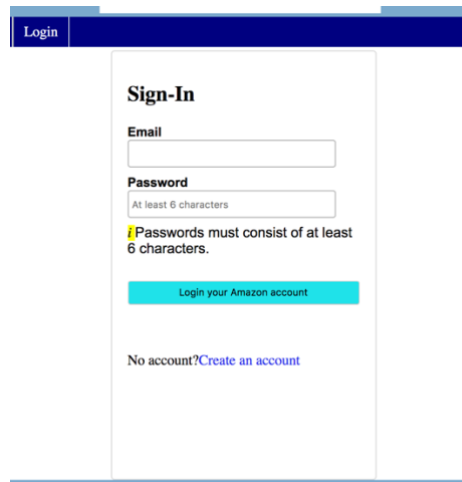

Registration page is about a html form. This page needs the customer to input the personal information to complete registration. The code is written in registration.handlebars file. The style is set in style.css file.

Login View

1. Login page

    Login page is also about a html form. This page needs the customer to validate

the personal information to enter the account. The code is written in

login.handlebars file. The style is set in style.css file.

Models

1. Product category section

```
const categorySection={
    fakeCG:[],

    initCategory()
    {

        this.fakeCG.push({
            category: `Masks`,
            categoryImg: `img/mask.jpg`,

        });

        this.fakeCG.push({
            category: `Hat & Socks`,
            categoryImg: `img/hatSock.jpg`
        });

        this.fakeCG.push({
            category: 'Clothes',
            categoryImg: 'img/clothes.jpg'
```

The data for the Product category section is static and stored within the

categorySection object in the product.js file.

2. Best Seller category section

```
const products=
{
    fakePD:[],

    initProduct()
    {

        this.fakePD.push({
            title:`Mchoice 50 PCS Disposable Earloop Face Mask Filters Bacter
            price:`CDN$ 19.67`,
            productImg: `img/product1.jpg`,
            categoryName:`Mask`,
            bestSeller:true
        });

        this.fakePD.push({
            title: `Carhartt Men's Acrylic Watch Hat`,
            price: `CDN$ 13.99 - CDN$ 94.78`,
            productImg: `img/product2.jpg`,
            categoryName:`Hat and socks`,
            bestSeller:false
```
